- Scroll mechanism, key operated
- Accepts 5C collets, available metric 2mm - 28mm x 1mm or imperial 1/16" - 1 1/32" x 1/32"

Backplate 150mm
Unmachined
Item No. 5429

Item No. 9029

To mount a collet chuck to your lathe it is necessary to add a backplate. Machining the back plate is best undertaken on your lathe to achieve maximum accuracy. Secure the back plate to the spindle. Skim across the face to ensure squareness, then machine a spigot to match the register of the collet chuck. It is necessary to measure the p.c.d. of the fixing holes in order to secure the chuck to the backplate.

Headstock lubricant

- Due to the risk of damage by carrier, we can only deliver headstock lubricant with a machine
